

Thanks to Melbourne Cleaning Supplies

The i-mop & MCS have made this amount of clean drinking water available where it is needed most.

1,413,468
Litres

Thanks to using i-mop machines we save a lot of water. Made Blue calculates the water footprint of the impact of using i-mop machines at your destination and mirrors the litres saved one-of-one for people in developing countries who need this water. In a certified, measurable and traceable environment, backed by recognised charity and partner organisations.

Thank you for your commitment and support.

This sub certificate is a part of the yearly certificate that Future Technologies receives from Made Blue. It mirrors every litre that is saved by using i-mop machines. The amount of litres mentioned on this sub certificate is an estimate of the water usage of the machines that have been implemented at the customers locations.
